

# SECURE

— PVC COATED WIRE —

## PVC COATED WIRES ENSURES RUST RESISTANCE AND LONG-LASTING PROTECTION

BSRM Secure PVC Coated Wire is galvanized or made of black wire coating. The galvanized wire keeps the steel corrosion and rust proof and the PVC coating ensures the durability of the wire. This provides the wire with the necessary protection so that it can be used in rough environments with acidic soil, water and salted water. The wire is very renowned for its low price, elasticity, flame-resistance and high insulation. It lasts longer than regular GI wires as it is corrosion resistant and has anti-ageing features. BSRM uses virgin standard PVC to manufacture the wires.

For Commercial and Residential Security

## SECURE PVC COATED WIRE FEATURES:

- UV protected PVC
- More long-lasting than regular GI wires
- Comes with multiple layers of protection for protection against corrosion

## SECURE CHAIN LINK DESCRIPTION:

Wire Base, mm	2.00 to 4.00
Expansion Capability	500 MPA – 650 MPA
Zinc Coating	Commercial
PVC Coating	0.5 mm
Packing	According to customer/buyer demand

## USAGE OF SECURE CHAIN LINK FENCE: ---

- Forest preservation
- Animal farming
- Hangers
- Wires for hanging wet clothes
- To make chain link fences

Forest Preservation Fence
